WG/UNICEF Module on Inclusive Education

Inclusive education prescribes that all children, including children with disabilities,

- not only have **access to schooling within their own communities**,
- but they are also provided with **appropriate learning opportunities to achieve their full potential**, as pupils are seen as individuals who learn in different ways.

The priority is given to the creation of **appropriate educational environments** that are responsive to diversity.

Therefore the aim of inclusive education is to move from just focusing on 'access', to understanding ways to **increase active participation and engagement in learning**.

WG/UNICEF Module on Inclusive Education

Since 2012 UNICEF and WG have been working on the development of a set of questions that focus on *environmental factors* and *participation in school* for all children.

Goal: To design a survey module that can...

- be used in conjunction with the Child Functioning Module
 - be used across a variety of school contexts, focusing on formal education
 - identifies both facilitators and barriers to school participation for *children with and without disability*
 - provides information for policy.
-

Justification

- ✓ The **UN Convention on the Rights of the Child** (art. 28 & 29) and the **UN Convention on the Rights of Persons with Disabilities** (art. 24):

express the aim of guaranteeing quality education for all children and the importance of removing barriers and providing the support needed to fulfill each child's potential.

- ✓ The **Sustainable Development Goals**: Goal 4:
Ensure inclusive and equitable quality education and promotion of lifelong learning opportunities for all.
-

Rationale ⁽¹⁾

Children with disabilities are *less likely*:

- to ever go to school,
 - to learn essential skills if they do go to school,
- and
- *more likely* to drop out before completing a full course of education.

Disability is often a **more significant factor** in relation to **exclusion from education** than gender, geographical location, or living in poverty.

Rationale (2)

- ✓ **Exclusion from education** places children with disabilities at a **disadvantage for the rest of their lives**, putting them at higher risk of negative social and economic outcomes, and preventing their full participation in society.
 - ✓ **Poor availability of data on children with disabilities in school and out of school** affects the policy-makers' capacity to define strategies and to take appropriate actions in order to promote their full participation in school.
-

Development of the module: Review

A review was conducted on existing **survey tools**:

- With focus on environmental factors and participation of children with disabilities in school

Review found:

- 32 measures administered in 20 different countries with a total of 668 questions (from 1986 to 2010)
 - Surveys were found to focus on impairments as the primary cause of lack of participation in school
-

Development of the module: Consultations

Two meetings with **experts (survey design, education, disability) and key stakeholders** to identify data needs and develop conceptual framework (June 2013 and December 2014)

- Three **main domains** related to environment and disability were identified:
attitudes, accessibility, and affordability
- A separate section was included to address why a child might be ***out of school***

Several technical consultations between WG and UNICEF to develop the draft set of questions.

Domain: Attitudes

- Societal and cultural norms
 - Perceptions and attitudes of parents
 - Parent's or caregiver's perceptions of the value of education
 - Parent's or caregiver's perceptions of inclusive education
 - Attitudes of school personnel
 - Attitudes of others children
-

Domain: Accessibility

- *Physical environment*
 - Entryways, corridors, bathrooms, transportation to/from school...
 - *Information accessibility*
 - Classroom materials for children in different format
 - *Communication accessibility*
 - *Programme accessibility and adaptability*
 - Teachers making changes to accommodate children with special needs
-

Domain: Affordability

- *Fees, costs and competition for resources*
 - *Availability of types of assistance*
 - ✓ Financial
 - ✓ Assistive devices
 - ✓ Rehabilitation
 - *Non-educational benefits*
 - ✓ Meals
-

Out of school children

- Furthermore, it was deemed important to develop a separate section of the questionnaire aimed at getting information on reasons that a child may be out of school.
-

Module Components: Respondents

- **Attitudes**: all respondents
 - **School environment** (*Accessibility/Affordability*):
mother/primary caregiver of a child who is
currently attending school
 - **Out of school**:
mother/primary caregiver of a child who is
currently not attending school
-

Example of questions: **Attitudes**

Do you think it would be ok to keep a child from going to school...

- If a child doesn't want to go?
 - How about if a child has a disability?
 - What about if a child is unable to learn?
 - What about if a child needs to work or help at home?
-

Example of questions:

School environment

- When at school, can (*name*) use books or other learning material that (he/she) needs?
 - Does (*name*) use areas at the school where children play and socialize, such as a playground or sports field? If No, why?
 - Does (*name*) feel accepted by (his/her) classmates?
 - Is the school responsive if you have concerns about (*name*)'s education?
-

Example of questions:

Out of school (a)

- Is there enough money to pay the costs of (*name*)'s schooling?
 - Is it safe for (*name*) to travel to/from school?
 - Is school too far away?
 - Does (*name*) need special services or assistance such as a speech therapist, support worker, or sign language interpretation to attend school?
 - Are they available for (*name*) to use at school?
-

Example of questions:

Out of school (b)

- Does the school have a program that meets (*name*)'s learning needs?
 - Was (*name*) refused entry into the school?
 - Can (*name*) use the toilet at school?
 - Does (*name*) have a health condition that prevents (him/her) from going to school?
 - Is (*name*) married or about to get married?
 - Is (*name*) interested in going to school?
-

Development of the module: Testing

Cognitive testing completed in:

2015:

- **United States**: 35 interviews (2 rounds)

2016:

- **India**: 40 interviews
- **Jamaica**: 40 interviews

2017:

- **Cambodia**: 69 interviews
 - **Kazakhstan**: 60 interviews
-

Next steps

- Questionnaire revised based on latest results from Kazakhstan
 - Technical consultation to review findings
 - Further cognitive and field testing
 - Finalize the module
 - Implementation guidelines documents
-

Summary: Key Aspects of the Module

- Focuses on *formal* education
 - Focuses on environmental influences on school participation, considering *children*:
 - *with* and *without* disabilities
 - *in* and *out* of school
 - Can be used across a variety of school contexts
 - Is intended to be used in conjunction with the Module on Child Functioning
 - Relies on parental perceptions/assessments
 - Takes approximately 10-20 minutes
-

Discussion
