Analytic Guidelines: Creating Disability Identifiers Using the Washington Group Extended Set on Functioning (WG-ES) SPSS Syntax

Introduction

As with the WG Short Set on Functioning (WG-SS), analysis of the WG Extended Set on Functioning (WG-ES) can also produce multiple disability identifiers based on the choice of the severity threshold or cut-off. The SPSS syntax below, however, provides for the calculation of disability identifiers using different sets of WG-ES domains using the recommended cut-off for international comparisons (described below).

For each of the disability identifiers described, the level of inclusion is at least one domain/question is coded A LOT OF DIFFICULTY or CANNOT DO AT ALL – or – for the domains Anxiety, Depression, Pain and Fatigue, the highest level of difficulty on a four-point scale.

Each of the four disability identifiers described in this document is defined based on the choice of domains of functioning included:

WG-SS: Short Set: 6 domains, 6 questions.

WG-ES 1: *Extended Set*: 11 domains, 25 questions.

WG-ES 2: *Modified Extended Set* (WG-ES MINUS Pain and Fatigue): 9 domains, 20 questions.

WG-ES 3: *Short Set Enhanced* (WG-SS PLUS Upper body, Anxiety and Depression): 9 domains, 12 questions.

NOTE: For data analysis, use your standard weighting and estimation techniques.

The Washington Group Implementation Documents

cover the tools developed by the Washington Group on Disability Statistics (WG) to collect internationally comparable disability data on censuses and surveys. The documents address best practices in implementing the Short Set, Extended Set, Short Set - Enhanced, the WG / UNICEF Child Functioning Modules for children 2-4 and 5-17 years of age, and the WG / ILO LFS Disability Module, as well as other WG tools. Topics include translation, question specifications, analytic guidelines, programming code for analyses, the use of the tools for the purposes of disaggregation, and more.

To locate other WG Implementation Documents and more information, visit the Washington Group website: http://www.washingtongroup-disability.com/.

The SPSS syntax is based on the *variable labels* indicated in the table below. The complete WG-ES module includes more questions than appear in this table. Disability status is determined through difficulty in the basic, universal activities *without* the use of assistive technology or other assistance. There are several mobility questions, for example, that reference difficulty walking *with* the use of assistance. Those questions are not included in the analytic plan provided here; however, they can be

used in other analyses that look more closely into the effect of assistive technology (environmental facilitators) on functioning.

Only those questions/variables below are used in the determination of disability identifiers. Ensure that you use the same *variable labels* OR revise the SPSS syntax to reflect the *variable labels* in your database.

The WG-SS is administered as part of the U.S. National Health Interview Survey (NHIS). The data used to prepare these guidelines come from the 2013 NHIS.

Note to users of the NHIS: the variable names in the NHIS data file and documentation may differ from those used in this document; e.g., the self-care domain variable referenced as SC-SS in this document is referred to as UB_SS in the NHIS data file and documentation.

* IN THE SYNTAX BELOW, NOTE THAT ITEMS WITH RESPONSE PATTERN 6 (ANX_3, DEP_3, PAIN_4 AND TIRED_3) ARE RECODED TO PLACE "SOMEWHERE BETWEEN" NUMERICALLY IN-BETWEEN "A LITTLE" AND "A LOT".

The WG-SS is embedded within the WG-ES.

The WG-ES is supplemented with:

- additional questions to those existing 6 domains and
- additional domains (several with multiple questions).

The SPSS syntax presented below includes a couple of elements that were particular to the content of the WG-ES.

First, it was important to determine single domain-specific identifiers for those domains of functioning that included multiple questions. For example, upper body functioning includes two questions, each eliciting specific and unique actions: difficulty raising a bottle of water from waist to eye level (arms/shoulders), and difficulty using hands and fingers. Those two questions were analyzed and combined to produce a single upper body indicator with four levels of difficulty ranging from 1 - low

difficulty to 4 - high difficulty – not unlike the categorical responses to the single WG-SS questions: no difficulty, some difficulty, a lot of difficulty and cannot do at all. As with the upper body domain, the WG-ES domains cognition, anxiety, depression, pain and fatigue have different response patterns that do not readily 'translate' into the usual WG response pattern. For these domains of functioning, a similar 4-scale response pattern was produced and annotated as level 1 through 4, where 1 is the lowest level of difficulty and 4 is the highest.

Second, individual domain indicators were assessed to determine the appropriate cut-off for inclusion into an overall disability identifier – for the purposes of estimating prevalence and disaggregating outcome indicators by disability status.

NOTE:

For all variables, codes (7) Refused, (8) Not Ascertained, and (9) Don't know, are recoded to Missing.

SPSS WG Extended Set Syntax Annotated with Output Tables

Actual SPSS syntax is indented and the commands are in **BOLD text**.

NOTE: For data analysis, use your standard weighting and estimation techniques.

The syntax below produces **frequency distributions** on individual domain questions – **cross-tabulations** on multiple domain questions, and calculates INDICATOR variables for domains with multiple questions – for use in the determination of disability identifiers.

VISION

Step 1. Generate frequency distribution for Vision domain.

VIS_SS is the WG-SS Vision question.

No recoding – the Short Set question is used in the determination of disability identifiers.

FREQUENCIES VIS SS

VIS_SS

HEARING

Step 3. Generate frequency distributions and cross-tabulations for Hearing domain questions and determine Hearing Indicator

HEAR_SS is the WG-SS Hearing question.

HEAR_3 is Difficulty hearing conversation with one person in quiet room.

HEAR_4 is Difficulty hearing one person in noisier room.

FREQUENCIES HEAR_SS HEAR_3 HEAR_4.

Step 4. For Hearing questions, recode Hear_3 and Hear_4 to value 4 (cannot do at all) if Hear_SS is 4 (Cannot do at all).

The syntax below recodes Hear_3 and Hear_4 to 4 (cannot do at all) if Hear_SS is 4 (cannot do at all).

IF HEAR_SS = 4 HEAR_3 = 4. **IF** HEAR_SS = 4 HEAR_4 = 4.

FREQUENCIES HEAR_3 HEAR_4.

HEAR_3: Difficulty hearing conversation with one person in quiet room

| Total | | 17326 | 100.0 | | |

Step 5. Generate a cross-tabulation of the two Hearing Extended Set questions: HEAR_3 and HEAR_4.

The syntax below produces a cross-tabulation of the two Extended Set questions: HEAR_3: *Difficulty hearing in a quiet room* and HEAR_4: *Difficulty hearing in a noisier room* to determine a single HEARING INDICATOR.

CROSSTABS HEAR_4 BY HEAR_3.

Step 6. Create a HEARING INDICATOR (H_INDICATOR) based on the two additional hearing questions HEAR_3 and HEAR_4.

The syntax below creates a HEARING INDICATOR (H_INDICATOR) based on the cross-tabulation of the two additional hearing questions HEAR_3 and HEAR_4.

COMPUTE H INDICATOR = 0.

IF (HEAR_3 = 1 AND HEAR_4 = 1) OR (HEAR_3 = 1 AND HEAR_4 = 2) H_INDICATOR = 1.

IF (HEAR_3 = 2 AND (HEAR_4 = 1 OR HEAR_4 = 2)) OR (HEAR_3 = 1 AND HEAR_4 = 3) H INDICATOR = 2.

IF (HEAR_3 = 3 AND (HEAR_4 = 1 OR HEAR_4 = 2) OR (HEAR_3 = 2 AND HEAR_4 = 3) OR (HEAR_3 = 1 AND HEAR_4 = 4)) H_INDICATOR = 3.

IF ((HEAR_3 = 3 AND HEAR_4 = 3) OR HEAR_3 = 4 OR (HEAR_4 = 4 AND (HEAR_3 = 2 OR HEAR_3 = 3))) H INDICATOR = 4.

FREQUENCIES H_INDICATOR.

| Total | | 17326 | 100.0 | | |

COGNITION: Degree of difficulty remembering or concentrating

Step 7. Generate frequency distributions and cross-tabulations for Cognition domain questions and determine a Cognition Indicator.

COG_SS is the WG-SS Cognition question.

Frequency distribution of the WG-SS cognition question: COG_SS.

FREQUENCIES COG_SS.

Degree of difficulty remembering or concentrating

| | | | | Valid | Cumulative |
|---------|---------------------|-----------|---------|---------|------------|
| | | Frequency | Percent | Percent | Percent |
| Valid | No difficulty | 13719 | 79.2 | 81.9 | 81.9 |

| Missing | | 573 | 3.3 | | |
| Total | | 17326 | 100.0 | | |

If response to COG-SS is *some difficulty*, *a lot of difficulty* or *cannot do at all*, then the respondent is asked COG_1: whether they have difficulty remembering, concentrating or both.

FREQUENCIES COG_1.

COG_1: Difficulty remembering, concentrating, or both?

| | | | | Valid | Cumulative |
|---------|--------------------------------------|-----------|---------|---------|------------|
| | | Frequency | Percent | Percent | Percent |
| Valid | Difficulty remembering only | 983 | 5.7 | 32.4 | 32.4 |

| Missing | | 14296 | 82.5 | | |
| Total | | 17326 | 100.0 | | |

Step 8. Account for those who did not answer COG_1 (COG_SS is 1 – no difficulty and they were skipped) by recoding COG_1 to 0 (No difficulty).

If response to COG-SS is 1: *no difficulty*, then the variable COG_1 is recoded into COG_1A, and the value assigned is 0: *no difficulty*.

COMPUTE COG_1A = COG_1. IF (COG_SS = 1) COG_1A = 0. FREQUENCIES COG_1A.

 COG_1A

| | | Frequency | Percent | Valid Percent | Cumulative Percent |

| Missing | | 577 | 3.3 | | |
| Total | | 17326 | 100.0 | | |

Step 9. Generate frequency distribution for remaining cognition questions.

Frequency distribution of the Cognition extended REMEMBERING questions: COG_2 *How often have difficulty remembering*, and COG_3 *Amount of things you have difficulty remembering*.

FREQUENCIES COG_2 COG_3.

COG_2: How often have difficulty remembering?

| | | Frequency | Percent | Valid Percent | Cumulative Percent |
|---------|-----------------|-----------|---------|---------------|--------------------|
| Valid | Sometimes | 1916 | 11.1 | 72.4 | 72.4 |

| Missing | | 14681 | 84.7 | | |
| Total | | 17326 | 100.0 | | |

COG_3: Amount of things you have difficulty remembering?

| | | | | | Cumulative |
|---------|-------------------|-----------|---------|---------------|------------|
| | | Frequency | Percent | Valid Percent | Percent |
| Valid | A few things | 2119 | 12.2 | 80.3 | 80.3 |

| Missing | | 14687 | 84.8 | | |
| Total | | 17326 | 100.0 | | |

Step 10. Generate cross-tabulation of the two Cognition extended set questions COG_2 by COG_3.

The syntax below produces a cross-tabulation of the two Extended Set REMEMBERING questions: COG_2: *How often you have difficulty remembering* and COG_3: *The amount of things you have difficulty remembering* to determine a single REMEMBERING INDICATOR.

CROSSTABS COG_2 BY COG_3.

COG_3: Amount of things you have difficulty remembering?

| COG_2: How often do you | have difficulty | | | Almost | |
|---------------------------|-----------------|--------------|-----------------|------------|-------|
| remembering? | | A few things | A lot of things | everything | Total |
| How often have difficulty | Sometimes | 1788 | 105 | 20 | 1913 |
| remembering? | Often | 279 | 197 | 34 | 510 |
| | All of the time | 51 | 84 | 80 | 215 |
| Total | | 2118 | 386 | 134 | 2638 |

Step 11. Create a Remembering Indicator based on distribution of COG_2 and COG_3.

The syntax below creates a REMEMBERING INDICATOR (R_INDICATOR) based on the two additional remembering questions (COG_2 and COG_3).

If COG_SS is 1: no difficulty, then the Remembering Indicator is coded as 1: the lowest level of difficulty.

```
COMPUTE R_INDICATOR = 0.

IF (COG_SS = 1) R_INDICATOR = 1.

IF ((COG_2 = 1 AND COG_3 = 1) OR (COG_3 = 1 AND COG_2 = 2) OR (COG_3 = 2 AND COG_2 = 1)) R_INDICATOR = 2.

IF (COG_3 = 2 AND COG_2 = 2) R_INDICATOR = 3.

IF (COG_3 = 3 OR COG_2 = 3) R_INDICATOR = 4.

FREQUENCIES R_INDICATOR.
```

Step 12. If COG_1A is coded as 2 (concentrating only), then the Remembering Indicator is coded as 5.

These 388 individuals are respondents who were not included in the Remembering Indicator since they had only difficulty concentrating.

IF
$$(COG_1A = 2) R_INDICATOR = 5$$
.

Step 13. Generate frequency distribution of the Remembering Indicator.

FREQUENCIES R_INDICATOR.

R_INDICATOR Percent Valid Percent **Cumulative Percent** Frequency Valid .00 580 3.3 3.3 3.3 1.00 79.2 82.5 13719 79.2 2.00 2172 12.5 12.5 95.1 3.00 197 96.2 1.1 1.1 4.00 97.8 270 1.6 1.6 5.00 2.2 2.2 388 100.0 17326 Total 100.0 100.0

Step 14. Supplement Remembering Indicator with information on difficulty concentrating.

The syntax below adds information on whether cognitive difficulties are compounded by difficulty concentrating in addition to difficulty remembering.

Create a COGNITION INDICATOR (COG_INDICATOR) based on R_INDICATOR (above) and the cognition question (COG_1).

The 388 individuals with 'concentrating only' were allocated as follows:

- 1. 357 with a little difficulty on COG SS question were classified as 2
- 2. 30 with a lot of difficulty on COG_SS question were classified as 3
- 3. 1 with cannot do on COG SS question was classified as 4

Those with <u>both</u> remembering <u>and</u> concentrating difficulty were upgraded 36 individuals from 2 to 3, and 125 individuals from 3 to 4.

```
COMPUTE COG_INDICATOR = 0.
COMPUTE COG_INDICATOR = R_INDICATOR.
```

IF $(R_INDICATOR = 5 AND COG_SS = 2) COG_INDICATOR = 2$.

IF $(R_INDICATOR = 5 AND COG_SS = 3) COG_INDICATOR = 3.$

IF (R_INDICATOR = 5 AND COG_SS = 4) COG_INDICATOR = 4.

IF (R_INDICATOR = 2 AND COG_1 = 3 AND COG_SS = 3) COG_INDICATOR = 3.

IF $(R_INDICATOR = 3 AND COG_1 = 3 AND COG_SS = 3) COG_INDICATOR = 4$.

Step 15. Generate frequency distribution of the Cognition Indicator.

FREQUENCIES COG_INDICATOR.

Step 34. Generate a cross-tabulation of the PAIN Extended Set questions: PAIN_2 and PAIN_4Y.

The syntax below produces a cross-tabulation of PAIN_2: *Frequency of pain in the past 3 months* and PAIN_4Y: *How much pain you has the last time you had pain* (a measure of intensity) – used to determine a single PAIN INDICATOR (P_INDICATOR).

CROSSTABS PAIN_4Y BY PAIN_2.

PAIN_2: Frequency of pain in past 3 months

| PAIN_4Y: | How much pain you | | Some | Most | Every | |

Step 35. Create a PAIN INDICATOR (P_INDICATOR) based on the two PAIN questions PAIN_2 and PAIN_4Y.

Syntax below creates P_INDICATOR based on the distribution in the cross-tabulation above.

COMPUTE P INDICATOR = 0.

IF (PAIN_2 = 3 AND PAIN_4Y = 3) OR (PAIN_2 = 4 AND PAIN_4Y = 2) P_INDICATOR = 3

IF $(PAIN_2 = 4 AND PAIN_4Y = 3) P_INDICATOR = 4$.

RECODE P_INDICATOR (0=SYSMIS).

FREQUENCIES P_INDICATOR.

FATIGUE (Tired)

Step 36.Generate frequency distribution on FATIGUE Extended Set questions Tired_1, Tired_2 and Tired_3.

First, calculate frequency distributions on TIRED_1: *How often you felt tired in the past 3 months*.

FREQUENCIES TIRED_1.

Step 37. Recode Tired_2 to 0 (not asked) if Tired_1 is 1 (Never).

If response to TIRED_1 is 1: Never, then TIRED_2 (*How long most recent tired or exhausted feelings lasted*) is not asked. This variable is recoded so these individuals are included in the syntax below.

IF (TIRED_1 = 1) TIRED_2=0. VALUE LABELS TIRED_2 0 'NOT ASKED'. FREQUENCIES TIRED_2.

Step 38. The syntax below recodes TIRED_3 into TIRED_3Y to place "SOMEWHERE BETWEEN" numerically in-between "A LITTLE" and "A LOT".

Also, if response to TIRED_1 is 1: Never, then TIRED_3 (*Level of tiredness*) is not asked. This variable is recoded so these individuals are included in the syntax below.

COMPUTE TIRED_3Y = TIRED_3.

IF (TIRED_1 = 1) TIRED_3Y=0. **RECODE** TIRED_3Y (1=1) (2=3) (3=2).

VALUE LABELS TIRED_3Y 0 'NOT ASKED' 1 'A LITTLE' 2 'IN BETWEEN' 3 'A LOT'. VARIABLE LABELS TIRED_3Y 'LEVEL OF TIREDNESS'.

POSTSCRIPT: Why exclude Pain and Fatigue?

Of note is the exclusion of the pain and fatigue domains from several of the Disability Identifiers above. There has been considerable discussion within the WG on these domains. They are not, strictly speaking, domains of functioning – and our analyses indicated that they are both highly correlated with other domains – and that the rates of disability with the inclusion of these domains can be very high. Finally, in terms of international comparability, these domains are less universal; that is, they are more susceptible to local, socio-cultural influences than other domains of functioning.

For these reasons, we chose to exclude them from several of these analyses, though they can be included in supplemental analyses carried out by NSOs on a national basis.
